

I am strongly opposed to the attempt of the NAB to limit the focus and scope of satellite radio. This is a wonderful, innovative new service and there is no reason why they should not offer local traffic and weather reports. Is this not the same thing that the "Weather Channel" does, yet they are not banned from doing so... I can turn to their channel and get my local weather, yes right here in my home! Is that such a terrible thing? Doesen't government have better things to do than to try to limit the scope of satellite radio, that I pay to receive? Yes, I know that the NAB are big contributors to some, but have some guts and do what is right.

You should not cave into the hand that feeds your pocketbook by letting this petition through. I will be watching the votes on this carefully and will keep in mind the results when I go to vote.
